CONHARMONICALLY RECURRENT SASAKIAN MANIFOLDS 209-215

**Abstract:** The object of this paper is to study a Sasakian manifold which is conharmonically recurrent.

**G. Das and Minatee Mohapatra**

DEGREE OF APPROXIMATION OF FUNCTIONS BY THE  $(Z, \gamma, \delta)$  TRANSFORM  
OF ITS FOURIER SERIES 217-223

**I. J. Maddox**

ALMOST PERIODIC DOUBLE SEQUENCES 225-231

**Abstract:** Almost periodic double sequences with values in a Banach space are considered, together with related concepts.

**Pramila Srivastava and Mona Khare**

ON LATTICES OF FUZZY BASIC PROXIMITIES 233-245

**Abstract:** The present paper deals with the lattice structure of the family  $M(X)$  of fuzzy basic proximities on  $X$  partially ordered by set inclusion. The notion of pointwise compatibility between fuzzy basic proximities has been introduced and some complete distributive sublattices of  $M(X)$  have been investigated.

ON UPPER AND LOWER  $\theta$ -IRRESOLUTE MULTIFUNCTIONS 247-257

**B. E. Rhoades**

THE POINT SPECTRUM FOR DOUBLE HAUSDORFF MATRICES ON VARIOUS SPACES 259-263

**Abstract:** In a recent paper Okutoyi and Thorpe [2] determined the spectrum of the double Cesaro matrix of order 1, on the space  $c_0(c_0, )$ , where  $c_0$  is the space of null sequence. In this paper we determine the point spectrum of a wide class of double Hausdorff matrices, considered as operators over  $X(X)$ , where  $X$  is any one of the spaces  $c_0, l^p, 1 \leq p < \infty$ , or  $c$ , the space of convergent sequences.

INTEGRATION THEORY FOR BANACH-VALUED MULTIFUNCTIONS\*

265-284

**Abstract:** This paper establishes some fundamental theorems for integration theory of Banach-valued multifunctions. It is proved that the Fatou's type theorem and dominated convergence theorem hold for Hausdorff and Kuratowski limits. The double and iterated integrations for two-variable multifunction are discussed so that the Fubini type theorem is established in the case of multifunctions.

A MODIFIED BESSEL INTEGRAL WITH A STATISTICAL APPLICATION

285-294

**Abstract:** An integral involving a modified Bessel function  $K_v(\cdot)$  is evaluated and its application in the Bayesian regression analysis is illustrated via the multivariate modified Bessel distribution.

**A. Kar and P. Bhattacharyya**

BITOPOLOGICAL PREOPEN SETS, PRECONTINUITY AND PREOPEN MAPPINGS

295-309

**Abstract:** The concepts of preopen sets, precontinuity and preopen mappings in a bitopological space are introduced in this paper. The conditions under which the various properties enjoyed by the above concepts in a single topological space can be generalized into a bitopological space are investigated.
